

Safe T.R.I.P. Tip

Test & Inspect the CO, Propane and Smoke Alarms installed on your RV weekly and each time your RV is taken out of storage. Replace alarms that don't work.

Replace all CO, Propane Alarms/Detectors over 5 years old and Smoke Alarms over 10 years old. The date code/replacement date may be on the back of the alarm.

Install only UL - RV listed CO, Propane and Smoke Alarm when you replace alarms. Add these alarms on older RV's to protect your family and friends.

Prevent accidents by teaching family and friends about the operation of the alarms and other safety equipment installed on your RV. Never ignore a sounding alarm.
